ARC1103 Theory of Architecture I

Course Description

The course of Theory of Architecture is an integral part of the teaching of architecture that helps the student to develop visual perception and cognition skills needed in the training of an architect. In our environment, where design skills are only introduced at university level, the course is a must for developing the skills mentioned.

Objectives/aim

- Introduction to the elements of Architecture and their relation to the whole.
- Understanding how space is formed and used to satisfy functional and psychological needs.
