Course Description

The course is a complementary part to the theoretical knowledge acquired by the student in other courses. It provides the student with an opportunity to have live experiences with the various tools used and activities carried out in workshops. This arms the student with skills for model making and it improves a student's perception of space and its functional requirements.

Objectives/aim

- To expose the students to the working environment.
- To enable the student apply the theoretical knowledge to solving practical based problems in all engineering disciplines.
