Course Description

This course is mainly a computer applications course. It builds on the concepts learnt by the student from the Engineering Drawing course offered at Level 1. It involves a lot of hands-on work by the students using a standard Computer Aided Design (CAD) and modelling software package.

Course Objectives

At the end of this course the student should be able to:

- Demonstrate capacity to utilize various features of a CAD solid modelling package.
- Generate various mechanical engineering parts/components and assemblies using a computer.
- Produce working drawings from existing models. **Course outcomes**

At the end of this course the student should be able to:

- Demonstrate capacity to utilize various features of a CAD solid modeling package.
- Generate various mechanical engineering parts/components and assemblies using a computer.
- Produce working drawings from existing models.

Course Content

- Introduction to the solid modelling environment(2 Hours)
- Swept protrusion (2 Hours)
- Lofted protrusion, patterns and thin wall command (2 Hours)
- Helical protrusion (4 Hours)
- Key Point curves, Curve by Table and Swept protrusion (4 Hours)
- Boolean feature commands (4 Hours)
- Assembly (4 Hours)

Sheet metal

- Production drawings (4 Hours)

(Practicals) Hands-on student activity (90 Hours)

Mode of Delivery

The course will be delivered through illustration of the basic concepts by the instructor in the computer laboratory followed by students' hands-on activity and tutorials. Computer Aided Design using 3-D modelling software such as Solid Edge or Solid Works is a requirement in this course.

Assessment Methods:

Course work (assignments and tests) and final examination and their relative contributions to final grade are shown as follows:

Requirement Percentage contribution

Course work 40%

Final examination 60%
