Brief Description of Course:

This course builds on Applied Thermodynamics Course. It gives a much more detailed study on air conditioning and refrigeration and expands on what was introduced in the earlier course.

Objectives of the Course:

The objectives of this course are:

- To introduce the principles and concepts of heating and cooling.
- To introduce the concept of refrigeration and air conditioning.

Expected Outcomes:

At the end of this course, a student should be able to:

- Perform heating and cooling load calculations
- Describe a refrigeration and air conditioning system
- Analyze a vapor compression and absorption system

Course Content:

Psychrometric Design (4 Hours)

- Properties of Humid Air
- Psychrometric Processes

Heating and Cooling Loads (8 Hours)

- Thermal Comfort
- Air Quality

- Thermal Transmission
- Infiltration and Ventilation Loads
- Components of the Cooling Load
- Internal Loads
- Solar Loads through Transparent Surfaces
- Solar Loads through Opaque Surfaces
- Cold-room design

Air-Conditioning Systems (8 Hours)

- Thermal Distribution Systems
- Classic Single-Zone Systems
- Multiple-Zone Systems
- Terminal-Reheat System
- Dual-Duct or Multizone System
- Variable-Air-Volume Systems

Fan and Duct Systems (4 Hours)

- Pressure drop in ducts and fittings
- Design of duct systems
- Centrifugal fans and their characteristics
- Fan laws

Refrigeration Plant (9 hours)

- The expansion valve
- Evaporators
- Compressors
- Condensers
- Refrigerants

Vapour Compression System Analysis (4 Hours)

- Balance points and System simulation
- Condenser Performance using both graphical and mathematical analysis
- Evaporator Performance using graphical and mathematical analysis

Absorption refrigeration (4 Hours)

- The Absorption Cycle
- The LiBr-Water Cycle
- Temperature, pressure, heat quantities and flow rates for the LiBr-Water cycle
- Coefficient of Performance
- Crystallization
- Capacity Control
- Aqua-Ammonia System

Noise Control (2 Hours)

- Acoustic Design in buildings

- Fan and air noise transmission in ducts

Maintenance and Commissioning

Commissioning Duct air-leakage test Airflow regulation Gas detectors

Ventilation rate measurement Maintenance schedule

Practicals (45 Hours)

Delivery Methods:

The course will be taught by using lectures and tutorials

Assessment Methods:

Course work (assignments and tests) and final examination and their relative contributions to final grade are shown as follows:

Requirement Percentage contribution

Course work 40%

Final examination 60%

Total 100%
